PCT/US04/32296

Rox IV	TEXT OF THE	ABSTRACT	(Continuation of It	em 5 of the first sheet)
--------	-------------	----------	---------------------	--------------------------

The technical features mentioned in the abstract do not include a reference sign between parentheses (PCT Rule 8.1(d)).

#### NEW ABSTRACT

The invention provides a method and apparatus for coding information (fig. 5) that is specifically adapted for smaller presentation formats, such as in a hand held video player (fig. 1). The invention addresses, inter alia, reducing the complexity of video decoding (55), implementation of an MP3 decoder (56) using fixed point arithmetic, fast YcbCr to RGB conversion, encapsulation of a video stream and an MP3 audio stream into an AVI file, storing menu navigation and DVD subpicture information on a memory card, synchronization of audio and video streams, encryption of keys that are used for decryption of multimedia data (fig. 3), and very user interface (UI) adaptations for a hand held video player that implements the improved coding invention herein disclosed.

AND TO COMPANY FOR THE PROPERTY OF THE PROPERT

IAP5 Reg'd PCT/PTO 28 MAR 2006

V. 2. Citations and Explanations:

- Claims 1-3 lack novelty under PCT Article 33(2) as being anticipated by Boykin et al, US 2003/0079222.
   Re claims 1-3, the technical features as claimed are fully disclosed by Boykin. (See figs. 44 & 48, para. 0035, 0140, 0180, 0195).
- 2. Claim 4 meets the criteria set out in PCT Article 33(2)-(4), because the prior art does not teach or fairly suggest the technical features of synchronizing audio and video by assigning each decompressed video frame in a video stream a unique ID; assigning each audio packet in an audio stream a unique ID; using an AV sync code to monitor the Ids of a latest rendered video frame and audio packet; recalculating the Ids into real time stamps every time a video interrupt occurs; and using the AV sync code to compare the time stamps and determine whether a next video frame must be repeated or dropped, wherein the audio stream is never adjusted, and wherein the video frames are either skipped or repeated to fit a current audio position.
- 3. Claims 5-6 meet the criteria set out in PCT Article 33(2)-(4), because the prior art does not teach or fairly suggest the technical features of reducing the complexity of MPEG4 decoding by the combination of disabling intra AC prediction; disabling motion compensation rounding control; combining VLD and inverse quantization into one step; and simplifying inverse DCT with a significance map as claimed.
- Claim 7 lacks novelty under PCT Article 33(2) as being anticipated by Haskell et al, US 6,341,144.
   Re claim 7, the technical features as claimed are fully disclosed by Haskell. (See fig. 4, col. 6, lines 10-27).
- Claim 8 lacks novelty under PCT Article 33(2) as being anticipated by Kazui et al, US 2004/0032969.

  Re claim 8, the technical features as claimed are fully disclosed by Kazui. (See fig. 4, para. 0047 0050).
  - 6. Claim 9 lack an inventive step under PCT Article 33(3) as being obvious over Lan et al, US 2003/0095603.

    Re claim 9, the technical features as claimed are fully disclosed by Lan (see fig. 42, element 42, para. 0029) except Lan discloses only MPEG2 decoding and is silent on MPEG4 decoding. However, MPEG4 is an extension of MPEG2, and one skilled in the art would have found it obvious to modify the technique of combining variable length decoding and dequantization into one step as taught in Lan for MPEG4 decoding for the benefit of reduced bit rate object based coding.
  - Claims 10-11 lack novelty under PCT Article 33(2) as being anticipated by Pearson et al. US 2004/0263361.
     Re claims 10-11, the technical features as claimed are fully disclosed by Pearson et al. (See para 0039-0042).

	BOX III. OBSERVATIONS WHERE UNITY OF INVENTION IS LACKING
	1. This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.
	Group 1, claims 1-3 pertain to a real-time video decoder for a mobile device, classified in class 375/240.25.
	Group 2, claim 4 pertains to a method of synchronization of audio and video data, classified in class 375/240.28; 348/515.
	Group 3, claims 5-11 pertain to methods of reducing complexities of MPEG4 decoding, classifified in class 375/240.27, 240.29.
	Group 4, claims 12-16 pertain to a method of fast YUV to "RGB555" conversion, classified in class 348/453.
	Group 5, claims 17-18 pertain to a method of compression B-frames, classified in class 375/240.15.
	Group 6, claims 19-22 pertains to a method of fast fixed point implementation of an MPEG-1 Layer 3 decoding, classified in class 704/500.
	Group 7, claims 23-26 pertain to a method for computational speedup of inverse modified discreet cosine transform, classified in class 375/240.2.
	Group 8, claim 27 pertains to a method for computational speedup of final windowing in audio/visual (AV) decoder, classified in class 348/596.
	Group 9, claims 28-31 pertain to a multimedia file format for compression/decompression facility classified in class 348/729.
NOTELLY FORESTEEN.	e.Group-10, claims 32-33 pertain to a multimedia encryption method-classified in class-380/239.
